

Table of Contents

Suggestions for the Day of the Exam	4
Multiple Choice Test Taking Strategies	5
Strategies for the TEExES.....	7
The TEExES Exams: General Information	9
Learner-Centered Proficiencies	10
Cooperative Learning	11
Bloom's Taxonomy of Levels of Thinking	12
Abbreviations and Their Meanings	13
Code of Ethics and Standard Practices for Texas Educators	14
Test Framework	18
The Domains and Their Competencies.....	20
Competency Discussions	35

Competency 1 Selecting and managing learning activities to ensure the safety of all students

1.a. Current sources of information about laboratory safety, including safety regulations and guidelines for the use of science facilities.....	35
1.b. Potential safety hazards in the laboratory and in the field and safety applications	36
1.c. Safe practices in planning and implementing all instructional activities and designs .	36
1.d. Procedures for selecting, maintaining, and safely using chemicals, tools, technologies, materials, specimens, and equipment	38
1.e. Appropriate equipment and technology (e.g., Internet, spreadsheet, Calculator Based Laboratory) for gathering, organizing, displaying, and communicating data in a variety of ways (e.g., charts, tables, graphs, diagrams, written reports, oral presentations).....	39
1.f. Use of tools, techniques, and technology to gather, organize, and analyze data and how to apply appropriate methods of statistical measures and analysis	40
1.g. Techniques to calibrate measuring devices and understands concepts of precision, accuracy, and error with regard to reading and recording numerical data from scientific instruments	41
1.h. International System of Units (i.e., metric system) and performs unit conversions within and across measurement systems	41

Competency 2 The nature of science, the process of scientific inquiry, and the unifying concepts that are common to all sciences

2.a. The nature of science, the relationship between science and technology, the predictive power of science, and limitations to the scope of science	43
2.b. The characteristics of various types of scientific investigations and how and why scientists use different types of scientific investigations	44
2.c. Principles and procedures for designing and conducting a variety of scientific investigations	44
2.d. Logical reasoning, verifiable observational and experimental evidence, and peer review	45
2.e. How to identify potential sources of error in an investigation, evaluate the validity of scientific data, and develop and analyze different explanations for a	

given scientific result.....	46
2.f. Characteristics and general features of systems; how properties and patterns of systems can be described in terms of space, time, energy, and matter; and how system components and different systems interact.....	46
2.g. Applying and analyzing the systems model	47
2.h. Shared themes and concepts	47
2.i. Models used to represent the natural world and how to evaluate the strengths and limitations of a variety of scientific models	48

Competency 3 The history of science, how science impacts the daily lives of students, and how science interacts with and influences personal and

societal decisions	48
3.a. The historical development of science, key events in the history of science, and the contributions that diverse cultures and individuals of both genders have made to scientific knowledge.....	49
3.b. Use of examples from the history of science to demonstrate the changing nature of scientific theories and knowledge	51
3.c. Science as a human endeavor influenced by societal, cultural, and personal views of the world	51
3.d. The application of scientific ethics	52
3.e. Scientific principles to analyze factors (e.g., diet, exercise, personal behavior) that influence personal and societal choices concerning fitness and health	52
3.f. Scientific principles, the theory of probability, and risk/benefit analysis	54
3.g. The role science can play in helping resolve personal, societal, and global issues	59

Competency 4 The description of motion in one and two dimensions

4.a. Analyzing and interpreting graphs describing the motion of a particle.....	60
4.b. Vector concepts to displacement, velocity, and acceleration in order to analyze and describe the motion of a particle	60
4.c. Problems involving uniform and accelerated motion using scalar and vector quantities.....	62
4.d. Problems involving projectile motion.....	63
4.e. Problems involving uniform circular and rotary motion.....	63
4.f. Motion of fluids	54
4.g. Motion in terms of frames of reference and relativity concepts.....	65

Competency 5 The laws of motion

5.a. The forces acting in a given situation and constructs a free-body diagram	65
5.b. Problems involving the vector nature of force	66
5.c. Newton's laws to analyze and solve a variety of practical problems	69

Competency 6 The concepts of gravitational and electromagnetic forces in nature.....

6.a. The Law of Universal Gravitation to solve a variety of problems	72
6.b. Electrostatic forces, fields, and potentials	72
6.c. The properties of magnetic materials and the molecular theory of magnetism	73

6.d. The source of the magnetic field and calculating the magnetic field for various simple current distributions.....	73
6.e. The magnetic force on charged particles and current-carrying conductors	74
6.f. Electric and magnetic fields and the relationship between electricity and magnetism.....	75
6.g. The electromagnetic spectrum and the production of electromagnetic waves	75
Competency 7 Applications of electricity and magnetism	77
7.a. Examples of electrostatics	77
7.b. Electric current, resistance and resistivity, potential difference, capacitance, and electromotive force in conductors and circuits	77
7.c. Series and parallel DC circuits in terms of current, resistance, voltage, and power.....	78
7.d. Basic components and characteristics of AC circuits	80
7.e. The operation of an electromagnet.....	81
7.f. The operation of electric meters, motors, generators, and transformers	81
Competency 8 The conservation of energy and momentum.	
8.a. The concept of work.....	82
8.b. The relationships among work, energy, and power	82
8.c. Problems using the conservation of mechanical energy in a physical system	83
8.d. The work-energy theorem	84
8.e. Linear and angular momentum.....	84
8.f. Problems using the conservation of linear and angular momentum	85
Competency 9 The laws of thermodynamics	85
9.a. Methods of heat transfer (i.e., convection, conduction, radiation).....	85
9.b. Molecular interpretation of temperature and heat.....	85
9.c. Thermal expansion, heat capacity, and the relationship between heat and other forms of energy	86
9.d. First law of thermodynamics	86
9.e. Entropy and its relationship to the second law of thermodynamics	97
Competency 10 Characteristics and behavior of waves.....	87
10.a. Interrelationships among wave characteristics	87
10.b. Compares and contrasts transverse and longitudinal waves.....	87
10.c. Describes how various waves are propagated through different media	88
10.d. Properties of reflection and refraction	88
10.e. Principles of wave interference.....	90
10.l. Wave characteristics and behaviors in medical, industrial, and other real-world applications.....	91
Competency 11 The fundamental concepts of quantum physics	91
11.a. Wave-particle duality.....	91
11.b. Examples and consequences of the Uncertainty Principle	91
11.c. The photoelectric effect	92
11.d. The quantum model of the atom	92
11.e. Real-world applications of quantum phenomena	92
Competency 12 The characteristics of matter and atomic structure.....	94
12.a. Physical and chemical properties and changes of matter.....	94

12.b. The structure and properties of solids, liquids, and gases.....	95
12.c. Properties of substances (i.e., elements and compounds) and mixtures.....	95
12.d. The atom in terms of protons, neutrons, and electron clouds	96
12.e. Elements and isotopes by atomic number and mass number.....	96
12.f. Atomic orbitals and electron configurations and the relationship between electron energy levels and atomic structure	96
12.g. The nature and historical significance of the periodic table	97
12.h. The concept of periodicity	98
Competency 13 The properties of gases.....	98
13.a. Interrelationships among temperature, moles, pressure, and volume of gases contained within a closed system.....	98
13.b. Investigations with gases in a closed system	99
The gas laws (e.g., Charles's law, Boyle's law, combined gas law) to predict gas behavior in a variety of situations	99
13.d. Dalton's law of partial pressure in various situations	100
13.e. The relationship between Kinetic Molecular Theory and the ideal gas law	100
13.f. Analyzing mass relationships between reactants and products in chemical reactions involving gases	100
Competency 14 Properties and characteristics of ionic and covalent bonds	100
14.a. The electron configuration of an atom to its chemical reactivity	100
14.b. Compare and contrast characteristics of ionic and covalent bonds	100
14.c. The "octet" rule to construct Lewis structures	101
14.d. The arrangement of atoms in molecules, ionic crystals, polymers, and metallic substances	101
14.e. The influence of bonding forces on the physical and chemical properties of ionic and covalent substances	101
14.f. Intermolecular and intramolecular forces	102
14.g. The physical properties of a given substance	102
14.h. The concepts of electronegativity, electron affinity, and oxidation	102
14.i. Energy changes in the formation and dissociation of chemical bonds	102
14.j. The relationship between chemical bonding and molecular geometry	102
Competency 15 Chemical equations and chemical reactions	103
15.a. Elements, common ions, and compounds using scientific nomenclature.....	103
15.b. Symbols, formulas, and equations	103
15.c. Mass relationships involving percent composition, empirical formulas, and molecular formulas.....	104
15.d. Chemical equations using conservation of mass and charge	105
15.e. Mass relationships in chemical equations	105
15.f. Factors (e.g., temperature, pressure, concentration, catalysts) that influence the rate of a chemical reaction and describes their effects	105
15.g. Principles of chemical equilibrium and solves problems involving equilibrium constants.....	106
Identifies the chemical properties of a variety of common household chemicals	106
Competency.16 Types and properties of solutions	107
16.a. Factors that affect solubility	107
16.b. Characteristics of saturated, unsaturated, and supersaturated solutions	107
16.c. Molarity, normality, and percent composition of aqueous solutions.	

16.d. Precipitation reactions and derives net ionic equations	107
16.e. Colligative properties of solutions	108
16.f. Properties of electrolytes	108
16.g. Methods for measuring and comparing the rates of reaction	108
16.h. The structural properties of water	108
Competency 17 Energy transformations in physical and chemical processes	109
17.a. Energy transformations that occur in phase transitions	109
17.b. Problems in calorimetry	109
17.c. The law of conservation of energy	110
17.d. Thermodynamic relationships among spontaneous reactions, entropy, enthalpy, temperature, and Gibbs free energy	110
Competency 18 Nuclear fission, nuclear fusion, and nuclear reactions	111
18.a. Radioactivity and radioactive decay (i.e., alpha, beta, gamma)	111
18.b. Equations for nuclear reactions	111
18.c. Fission and fusion reactions.....	112
18.d. Radioactive elements to solve real-world problems	112
18.e. Stable and unstable isotopes	112
18.f. Issues associated with using nuclear energy	113
Competency 19 Oxidation and reduction reactions	113
19.a. Oxidation state of ions and atoms in compounds	113
19.b. Oxidation and reduction reactions	113
19.c. Utilizing reduction potentials to determine whether a redox reaction will occur spontaneously.....	114
19.d. Operation and applications of electrochemical cells.....	114
19.e. Applications of oxidation and reduction reactions from everyday life	115
Competency 20 Acids, bases, and their reactions	116
20.a, General properties of, and relationships among, acids, bases, and salts	116
20.b. Acids and bases using models of Arrhenius, Br nsted-Lowrey, and Lewis	116
20.c. Differentiating between strong and weak acids and bases.....	116
20.d. The relationship between hydronium ion concentration and pH for acids and bases	117
20.e. Acid-base equilibria and buffers	117.
20.f. Principles of acid-base titration	118
20.g. Neutralization reactions based on the principles of solution concentration and stoichiometry	118
20.h. The effects of acids and bases in the real world	119
Competency 21 Research-based theoretical and practical knowledge about teaching science, how students learn science, and the role of scientific inquiry in science instruction.....	120
21 .a. Research-based theories about how students develop scientific understanding and how developmental characteristics, prior knowledge, experience, and attitudes of students influence science learning	120
21.b. The importance of respecting student diversity	120
21.c. Strategies to encourage student self-motivation and engagement	122
21.d. Strategies to ensure all students comprehend content-related texts.....	122
21.e. The science teacher's role in developing the total school program	123

21.f. The learning environment	123
21.g. The rationale for using active learning and inquiry methods in science instruction ..	124
21.h. Designing and conducting an inquiry-based scientific investigation	124
21.i. Generating, refining, focusing, and testing scientific questions and hypotheses	124
21.j. Strategies for assisting students in learning to identify, refine, and focus scientific ideas and questions	124
21.k. Implementing inquiry strategies designed to promote the use of higher-level thinking skills	125
21.l. Making systematic observations and measurements	126
21.m. Learning activities allowing students to build upon their prior knowledge, and challenging them to expand their understanding of science	126
Competency 22 Monitoring and assessing science learning in laboratory, field, and classroom settings	127
22.a. Formal and informal assessments of student performance	127
22.b. Assessment and instruction in the science curriculum	129
22.c. Monitoring and assessing students' understanding of science concepts and skills on an ongoing basis	129
22.d. The purposes, characteristics, and uses of various types of assessment in science ...	129
22.e. Strategies for assessing students' prior knowledge and misconceptions about science	130
22.f. Characteristics of assessments, such as reliability, validity, and the absence of bias	130
22.g. Assessment as a learning experience for students and strategies for engaging students in meaningful self-assessment	131
22.h. Selecting assessment instruments	131
22.i. Clarifying teacher expectations	131
Sample Problems	132
Answers to Sample Problems	147
Solutions to Sample Problems	148
The Periodic Table of the Elements	150
Characteristics of The Periodic Table of the Elements.....	1.51
Safety Symbol Examples	153
Glossary and Index	154
